

LADDER SERIES 2201

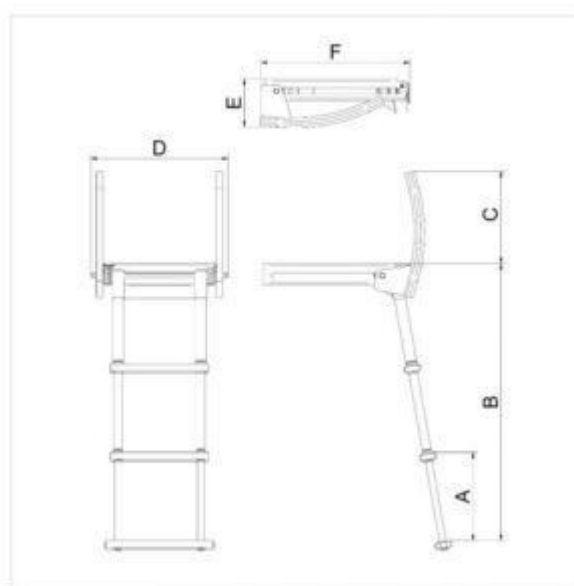

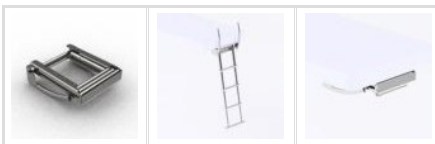

Under platform telescopic boat ladder made of mirror-polished AISI 316L stainless steel for boats and ribs with retractable and self-erecting handles.

The handles move up and down automatically only by rotating the ladder and simplify boarding from the water and ladder recovery. The ladder and the handles slide-out at the same time from the frame.

Steps in oval stainless steel have a water-draining hole, welded stainless steel lateral sealing caps and non-skid pads.

The ladder also features a locking safety lid that ensures that it cannot self-deploy when cruising.

This ladder meets the criteria of the new amendment to ISO 15085

ART	TO	B.	C.	D.	And	F.	STEPS
2201	255	805	270	380	140	430	3 with gray anti-slip
