

## **P 244 Seagull Offshore Manual Helm Seat**

The Besenzoni Design Center has thought about these too; it has devised, engineered and designed, and now – after listening over the course of the years to the requests of those who work on commercial vessels – Besenzoni has manufactured some helm seat models custom-tailored to their needs, summarising in this seat all the technology, comfort and design of yachts and recreational craft. Sturdiness and a wide and varied range of solutions are the characteristics that these seats offer also to workboats and military vessels.

- Helm chair upholstered with vinyl or real leather fabric
- Padded cushions and wider armrest to sit comfortably
- Polished stainless steel support, gas assisted possibility to lock at any position on the vertical stroke
- Manual rotation 360° and slider to move the seat forward and backward
- Manual fold up footrest
- Optional: custom logo embroidery and diamond stitching
- Optional: predisposition to the joystick and controllers installation (supplied by the customer); in this case, the seat rotation is 90° + 90°
