

9204 Hatch Securing Device - Stainless Steel – Compression

A 316 grade stainless steel hatch locking device. Simply close the hatch and turn the handle to secure the opening lid.

A cylinder key lock provides a low security deterrent to those wishing to gain unauthorised access to the hatch. A small lever simply blocks the handle from being lifted, therefore stopping the latch from being operated.

The product is made entirely from 316 grade stainless steel and comes complete with a counter plate and two keys. This product features a swivel lid which can be closed to protect the device from a build-up of dirt and salt residue. The product features an off centre cam system in order to apply a 4mm compression when securing.

- Weight (kg) 0.57
- Manufacturer Foresti & Suardi
- Finish 316 Stainless Steel
- Version Without Lock, with lock
- Max. Panel Thickness (mm) 55.00
- Min. Panel Thickness 12.00
